

CASE STUDIES

The Injured Jockeys Fund implemented CHARITease and BENEFICIARease during 2006, transferring the information from an old Fundraising and Grant Management system. SQL Server 2005 was introduced and in excess of 500,000 records were transferred with a clean up of addresses using Royal Mail ListCleaner service. A trading system was also developed which controls over £900,000 of trading income per year. BENEFICIARease is now in use by nine remote sites throughout the UK.

Back in 2004 Racing Welfare implemented CHARITease with BENEFICIARease embedded within the database so that all aspects of the organisation can be viewed from one location. Data was transferred from AppealMaster. New routines for property/tenancy and waiting lists has been rolled out to 6 remote sites throughout the UK.

The Ironbridge Gorge Museum Development Trust introduced CHARITease back in 2003 to handle all Fundraising and Gift Aid. Since then over £600,000 has been claimed in Gift Aid. Most recently a SQL Server version was introduced to cope with over 120,000 records. Routines were written for labels and reports for Business Club members and Livery companies which are specific to Ironbridge. With regular visit to Ironbridge we also provide IT advice for their website www.ironbridge.org.uk

Diabetes UK is the largest organisation in the UK working for people with diabetes, funding research, campaigning and helping people live with the condition. BENEFICIARease went live in 2008 with five people using the system. Diabetes UK is also the first client JAC has developed online forms for.

In 2007 / 2008 JAC developed a new Fundraising, Membership and Wings Appeal Database for RAFA, with over one million records to be completed on a data transfer this has been the largest project JAC has completed so far. With the assistance of Tony and Ann Abbey from RAFA with trip backwards and forwards from our offices the development and transfer to the new system went without any hiccups. Training for all the remote sites was completed in 2007 and the database went live in April 2008. The database has 50 users and 10 remote sites. A bespoke module for handling their Homes Funding was also developed and integrated into the database.

JAC have been working very closely with Refuge for a number of years now, developing new databases and handling the IT support. JAC project managed their IT during their move in 2007. A new CRIS system (Centralised Refuge Information System) went live in October 2008, handling 45 sites and 120 users. It will hold information relating to the women passing through their refuges and will provide instant statistical information across all of their services. The database will link to their financial package and supporting peoples systems. This database is unique in the marketplace and has been specifically developed for Refuge.
